EDMONTON DEMOGRAPHIC INDICATORS, 1989

Prepared by: Avi Akkerman
Forecasting and Policy Development Group
Strategic Planning Branch
Planning and Development Department
The City of Edmonton
April, 1990

PREFACE

The following report, *Edmonton Demographic Indicators, 1989,* provides a picture of the Edmonton population, mostly for the period between the Civic Censuses of Spring 1987 and 1989.

As in reports for previous years, the format and the content were chosen as a response to public and interdepartmental inquiries to the Planning and Development Department. As in past reports, the attempt has been to provide demographic information on as fine a level as possible, without compromising substance.

This report was prepared by Avi Akkerman. Assistance was provided by Angela Hingston, Tim Ford and Randall Selinger. The annual reports, *Edmonton Demographic Indicators,* are issued by the Forecasting and Policy Development Group, Strategic Planning Branch, The City of Edmonton Planning and Development Department.

Civic Census enumerations are conducted each year by the City of Edmonton Election and Census Office. The administration of the Civic Census was done by Friede Guenther.

CHAPTER 1. INTRODUCTION

The following is a report on demographic trends in Edmonton observed between the civic censuses of 1987 and 1989. All census reference dates are April 1 of the respective year. Much of the information presented here is for the 151 census tracts that comprise the area of the City of Edmonton. Boundaries of civic census tracts are congruent with boundaries of federal census tracts (1986), with the exception of those federal tracts that include areas of Edmonton CMA outside the civic boundaries. Accordingly, there are no boundary changes in census tracts between 1987 and 1989.

Each census tract consists of one or more census enumeration areas. No census tract includes portions of the same census enumeration area. For enumeration purposes of the 1989 civic census the city was divided into 642 census enumeration areas. Boundaries of civic census enumeration areas are not necessarily congruent with boundaries of the federal census (1986) enumeration areas. Furthermore, enumeration area boundaries between 1987 and 1989 civic censuses have changed, and the inclusion of enumeration areas in civic census tracts has changed as well.

Appendix A provides a list of civic census enumeration areas along with applicable changes between 1987 and 1989. Appendices B and C define civic census tracts by their comprising enumeration areas for 1987 and 1989, respectively. The census enumeration area map of the 1989 civic census, enclosed with this report, shows all enumeration areas and all tracts.

This report is divided into 8 theme chapters. The Introduction Chapter deals with general demographic topics of Edmonton, but it provides great geographic detail in age and sex distribution.

Table 1.1 provides detailed information on population age and sex distribution in the 642 census enumeration areas in 1989. Age distribution is for 18 standard 5-year age groups. Tables 1.2 and 1.3 provide some useful summary statistics for the two census dates. The geographic reference for Tables 1.2 and 1.3, as well as for most other tables in this report, are the 151 census tracts.

CHAPTER 2 POLICY ISSUES IN EDMONTON DEMOGRAPHY

Population in the city is expected to continue to increase in the next 15-20 years and then to begin to decline. Policy and strategic planning issues emerging from the recent demographic tendencies and projected trends reflect the aging of the Edmonton population and, in a related fashion, the overall population decline expected in the city after the turn of the century. The expected population decline is the result of continuing low, albeit fluctuating, age-specific fertility on the one hand, and the continuing increase in older age groups, on the other hand. The net result of these trends is the fact that reproduction of Edmonton population is below replacement level (Planning and Development, 1988).

These demographic trends have resulted in significant changes in the spatial redistribution of the population and are expected to continue. This is taking effect on two levels:

1. Demographic decline will continue to be most acute in the inner city due to fast aging.
2. Moderate population decline in older suburbs will become increasingly evident due to the aging of pre-school and school population.

The implications of this continuing redistribution are particularly significant for facility planning. Specifically, lesser need for pre-school, school and pediatric care in older suburbs can be expected, along with increased demand for geriatric care throughout the city and, in particular, in the inner city. Public transportation will be faced with the expected short and medium increase in population and households throughout selected suburbs (north-east, south-east, south-west), and the rapidly aging population in the inner city. Gradual changes in frequencies and routing throughout the existing public transit network may address the emerging transportation needs of rapidly aging population in the inner city and moderately growing population in the suburbs.

Specific decisions based on demographic data will benefit from the detailed spatio demographic distribution in Table 1.1 as well as in the summary Tables 1.1 and 1.3. Data in these tables, as in much of the rest of this report, are based on civic census enumerations. For this reason alone it is beneficial to present also federal census data, both for the sake of comparison with and evaluation of the civic census, and for the reason of additional available reference source. Basic demographic data from the federal censuses are presented for the period 1976 - 1986, and parallel civic census data for the period 1986 - 1989 are presented in Table 2.2. Tables 2.3 and 2.4 further specifically address the topic of population aging in Edmonton, Table 2.3 providing a time series over the period 1979 - 1994 for the city as a whole, and Table 2.4 listing the ten city neighbourhoods with the largest proportion of seniors in 1987 - 1989.

CHAPTER 3 SUBAREA POPULATION TRENDS, 1987-1989

A clear demographic tendency within the City indicates continuing decline of inner city areas and selective growth in the southern and northeastern suburbs. The ten fastest growing areas of the City, and the ten fastest declining areas are given in Tables 3.1 and 3.2. Detailed population age distribution for 1987 and 1989 is given in Tables 3.3 and 3.4, respectively.

Comparison between the 1987 and 1989 in Tables 3.3 and 3.4 identify the fastest growing areas of the City and those areas experiencing population loss.

TABLE 3.1 AREAS OF FASTEST POPULATION GROWTH, EDMONTON, 1987-1989

Census Tract	Approximate City Neighbourhood and General Area Within City	Population 1987	Population 1989	Percent Growth
5.03	Riverbend (South of 45 Ave)	4,277	6,557	53.3
90.10	Ridgewood (Mill Woods)	7,560	9,763	29.1
78.04	Lago Lindo (Lake District)	4,531	5,691	25.6
1.07	Keheewin, Bearspaw (Kaskitayo)	4,067	4,826	18.7
90.06	Crawford Plains (Mill Woods)	2,953	3,470	17.5
75.06	Kirkness, Hairsine (Clareview)	4,592	5,159	12.3
6.10	Lessard (West Jasper Place)	4,590	5,144	12.1

CHAPTER 4 SUBAREA POPULATION TRENDS BY LENGTH OF RESIDENCE, 1987 AND 1989

Residential stability of population can be measured as the percentage of persons for each area who resided at their address for a given period of time. In this case, stability was measured as the percentage of persons in each census tract who resided at their address three or more years prior to the civic census enumeration.

Table 4.1 is an extract of twelve census tracts and corresponding neighbourhoods that in 1987 and 1989 had 75% or more residents who had lived at their address for three years or more. Tables 4.2 and 4.3 show detailed distribution of population by length of residence at current address at the time of enumeration.

TABLE 4.1 AREAS OF HIGHEST RESIDENTIAL STABILITY, EDMONTON, 1987-1989

Census Tract	Average Stability 1987-89	Population 1987	Population 1989	Approximate Neighbourhoods
072.00	82%	3,425	3,146	Delwood
002.01	80%	3,676	7,109	Greenfield
024.00	79%	3,569	2,667	Valleyview/Crestwood
037.00	78%	4,437	3,279	Ottewell
009.00	78%	5,450	4,023	Laurier Heights
040.00	78%	4,688	3,433	Fulton Place
005.01	78%	2,228	1,622	Ramsey Hts, Brander Gardens
140.01	76%	3,321	2,060	Evergreen, N. Sturgeon-Horse Hill Annex
077.01	75%	4,014	2,781	Northmount
069.00	75%	3,331	2,471	Glengarry
068.00	75%	5,028	3,486	Rosslyn
016.02	75%	3,215	2,306	Argyll and Avonmore

CHAPTER 5 POPULATION BY OCCUPATIONAL STATUS

Tables 5.1 and 5.2 show the geographic distribution of population by occupational status throughout the 151 census tracts. The civic census has no means to identify persons by work categories such as the Standard Industrial Code, and it provides only general occupational status categories. Significantly, unemployment in the city can be traced using Tables 5.1 and 5.2. The Edmonton Demographic Indicators report of 1988 ranks unemployment throughout the city by census tracts (Table 17, Edmonton Demographic Indicators, 1988). The relative unemployment ranking of census tracts has not changed significantly between 1987 and 1989. Both the 1987 and the 1989 censuses indicate acute unemployment problems in areas in the eastern vicinity of 97 Street north of Jasper Avenue, to 124 Avenue. These areas are also commonly identified with low income (see Table 26, Edmonton Demographic Indicators, 1988) and it is public knowledge that they have the highest occurrence of violent crime in the city.

CHAPTER 6. SUBAREA TRENDS IN MARITAL STATUS AND GENDER, 1987-1989

Information on marital status by gender is being provided for the first time, and on an experimental basis. The civic census includes the question of marital status. Past experience has shown, however, that marital status information provided on a voluntary basis as is the case in the civic census enumeration, is often biased. In addition, enquiries that reach the Planning and Development Department do not usually seek information on marital status by gender. Past 'Demographic Indicators' reports, therefore, did not include this information.

The data in Tables 6.1 and 6.2 in this chapter are provided for males and females, and for 5 marital status categories: Single, Married, Divorced, Widowed, and Other. Due to relatively small populations in census tracts, and in light of the questionable reliability of enumeration response to the marital status question of the civic census, all information in Tables 6.1 and 6.2 must be treated with great caution.

CHAPTER 7 HOUSEHOLD DISTRIBUTION TRENDS, 1987-1989

The size of the average Edmonton household has continued to decline, a trend that has been evident since the 60's in most North-American urban centres. Tables 7.1 and 7.2 show detailed distribution of households by average size, along with distribution in dwelling size and type, in Edmonton census tracts between 1987 and 1989. In suburban areas the growth and decline in the number of households between 1987 and 1989 was consistent with the same trends as population (see Chapter 3). The trend in household distribution in the city, along with changes in population over the past decade can be followed in Table 7.3.

CHAPTER 8. POPULATION PROJECTIONS FOR EDMONTON AND SUBAREAS

This chapter includes two tables. Table 8.1 provides city-wide population projections by 5-year age groups. Table 8.2 provides population forecasts for 31 subareas of Edmonton, that approximate Edmonton traffic districts. For precise definition of the 31 subareas consult the 'Edmonton Demographic Indicators, 1988.'

The methodology of the citywide population projections was detailed in Research Paper 21, 'Fertility Trends and Their Implications on Population Projections in Edmonton, 1987-200,1' (1988). The subarea forecasts in Table 8.2 are follow an allocation procedure based on results obtained in the city-wide population projections. This procedure was described in Research Paper 25, 'Population Forecasts by Traffic Districts, 1988-2008,' (1988).
